These vehicles are incredibly reliable and easy to maintain. In fact, this is why numerous police

jurisdictions have used them for years in their fleet. They feel they really get their money's worth. People often drive Crown Victorias over hundreds of thousands of miles with little or no trouble. The parts are inexpensive and you will have no problem finding them with a lot of different retailers. Since so many mechanics are familiar with repairing Honda Accords, you will have no problem learning from an expert and getting what you need out of this vehicle. The worst thing you would want is to pop the hood of a vehicle and see that the parts are not labeled clearly or are hard to reach. The parts are also interchangeable with many other Chevrolet vehicles. While other automobiles only light the check engine indicator and leave you with guesswork, today's Corollas make the problem clear. That's a key reason why the Toyota Corolla is a great car to use for commuters. With the Silverado, you'll be able to learn how to repair one of these trucks at your own pace. The parts are inexpensive and easily accessible, whether you are purchasing your parts from a local retailer or an online shop. The Milan is an automobile that was produced by Ford, although it offers some upscale features. This gives you the chance to find parts easily while enjoying the solid performance that comes with Ford automobiles. Everything is labeled and the fluid reservoirs are clear so you can easily see their levels. The parts are simple to disconnect and install, making it easy for you to learn the ropes when handling repairs. Not only do they come with great warranties and maintenance plans, you will also be able to repair it on your own. The parts are cheap, and you will get great performance out of the vehicle when you take care of it regularly. If you're shopping for a vehicle that will bring out the inner mechanic in you, grab a repair manual and check some YouTube tutorials.

Then it's time to get to work! Consider these tips and visit our site to learn more. This blanket statement doesn't cover the whole truth about the subject. In fact, some regularly scheduled maintenance items are easier to replace on a 2004 Chevy Malibu than a 1972 Chevrolet Malibu. Last month the MotorEra.com website touched on this subject in an article covering the top five best car repair tips. Let's take the 50,000 foot view from the tips article and bring it down to earth to focus on the easiest DIY auto repair. In fact, you'll want to handle this particular service yourself from this day forward. Before we dig in, let me focus your attention to an article we put together explaining how to properly prepare for a DIY car repair. It contains insightful tips on how to get ready for success. Furthermore, you can get top quality parts to improve the safety of your automobile and perform the service in about 10 minutes. Yes, I'm talking about the replacement of the wiper blades. I know that it sounds like such an easy task that it shouldn't even require an article. The biggest mistake people make is not doing it themselves. They let the auto repair shop do it instead. Don't make this huge mistake. As a professional mechanic I can tell you that the shops I have worked for charge top dollar to replace the wiper blades for customers that are more than capable of doing it themselves. It goes beyond the cost of the service and the time restrictions of the busy motorist. Then they purchase these parts in bulk to save even more money. In addition, they mark these parts up 30 percent to maximize the profit. This means customers pay more than they should for parts that probably won't even last a year. When those cheap, made in China, plastic wiper blades disintegrate in the middle of a rainstorm it can turn into an unsafe situation.

High quality, metal framed, powder coated topquality rubber wiper blades exist and you need to get a pair. Personally, I get my wiper blades from Michelin. That's right, this tire company has a complete range of windshield wiper parts. Nobody makes better rubber than they do, in my opinion. Fortunately, they sell wiper blades directly to the consumer through big box stores like WalMart and Target. Something else that the average consumer doesn't realize becomes the design of the wiper blade. When you buy replacements from these topoftheline companies you get a builtin design that

takes aerodynamics and consideration. That's right; they use the wind at highway speeds to push the blade against the windshield. This provides superior clearing of the windshield that actually improves the faster you go. First of all, wiper blades are easier to install now than they were on automobiles from the 70s and 80s. Secondly, all you have to do is type the year, make and model of the vehicle into the YouTube search box with the words wiper blade. You'll be amazed at the sheer number of high quality videos showing you exactly how to perform the service yourself. How long this rubber part survives depends a lot on environmental conditions. Another big factor becomes how the wiper blades are used and abused. The part of the rubber insert that touches the windshield is thin and delicate. If you use your blades to clean bird droppings off the windshield or ice and snow, they won't even last a year. Why You'll get hairline cracks and fractures on the most important part of the rubber insert. And wiper blades that don't properly clean the windshield become the number one complaint from drivers about this system. Another thing that remains high on the list of driver complaints when it comes to wiper blades becomes chattering. This horrible noise happens as the arms sweep back and forth.

To understand how a worn or old blade can cause this condition let's talk about how they operate when they're new. As the rubber ages, it loses this flexibility. Now the arms are dragging them across the windshield and this can cause the annoying wiper blade chatter. Diagnosing your windshield wiper problem should start with replacing the blades. Especially, if they're more than a year old. With that said, the possibility exists that a more complex issues exist. In fact, you might want to learn more about the wiper motor and transmission assembly. Take a look at this comprehensive article about solving windshield wiper problems for more detailed information. Whether it's transporting the family through the woods to grandmothers for a Christmas dinner or another adventure, make sure the family car is ready. A good DIY trip inspection can give you peace of mind that lets you enjoy the trip and the company of those along for the ride. When something happens on a holiday, like Thanksgiving or Christmas, roadside assistance or finding an open auto repair shop might be impossible. The sad part is, a DIY trip inspection a few days before your departure date can surface potential problems and leave you the time to deal with them. Here we'll cover the inspection process used by professional drivers and a few additional tips. Although these usually apply to public transportation buses and 18 wheelers, many companies also require the inspection as policy. To make a long story short, many expensive traffic fines and over the road breakdowns remain preventable. Why ruin a vacation, holiday trip or even an important delivery of merchandise, because you didn't take the time to check the vehicle. The items on the checklist pertain to vehicle safety. This simple walk around first verifies that all the lights remain operational. This includes turn signals, headlights, marker lamps, fog lights and brake lights.

A closeup inspection of the lug nuts can also expose any lug nuts that loosened up or backed off. While the driver is inspecting the wheel they take a look at the tires and inspect for defects. Tread separation and sidewall damage remain two of the important items to look for. In addition, they visually inspect the inflation of each tire. Some companies require the driver to document the amount of pressure in each tire. This becomes a good opportunity to look for road debris, sticks and branches that can get stuck in the undercarriage as well. After completing the walk around and winding up at the front position, again they get down on one knee and look under the front. Here they pay close attention for wetness on the bottom side of the engine as a sign of a leaking fluid. Any discrepancies found on the DIY trip inspection require a followup by a trained mechanic before the vehicle hits the road. However, since this is your car we can take this DIY trip inspection one step further. Let's pop the hood while the engine is cold and take a look around the engine compartment area. In most cases were just talking about a visual inspection to verify that these fluids remain filled to their proper level. Most cars have fluid reservoirs for engine coolant, brake fluid, power steering fluid and windshield washer solvent. Top off these fluids as necessary, especially the windshield washer. You never know when 18 wheeler will kick up a splash of mud on the automobile windshield.

We'll inspect the drive belt looking for signs of cracking, wear or shredding. Next we'll move on to the cooling system hoses. The upper radiator hose is usually the easiest one to see. We're looking for signs of trouble. As an example, swelling, leakage around loose hose clamps or bubbles. If you radiator hoses look like a snake that swallowed a large rodent this becomes a sign to take action before you embark on the scheduled trip.

You can increase this level of serenity by performing a few additional services before you hit the road. Why not put on a brandnew set of wiper blades since it's the easiest DIY car repair you'll find. I don't know about you, but for me it seems like bad weather always passes between me and my destination. There's no reason to listen to the annoying scraping sound of a dried out wiper blade for 500 miles of driving. I see a lot of articles saying that people might be changing their oil too often. As a professional mechanic, I can tell you that I see exactly the opposite of too often. Why not treat your automobile to a lube, oil and filter service prior to the trip, even if it's a little early. Having the vehicle up in the air gives your trusted mechanic an excellent opportunity to point out any potential problems. Trust me, performing a DIY trip inspection on your car, truck or SUV makes these events more enjoyable on both the departure and return trips. Who doesn't want one. Read our complete guide on the slickest American sports cars. The muscle car gives a driver power and speed but they also look slick! Sales of muscle cars in America have increased nearly 35% since 2005. Not all muscle cars are equal. Throughout history, a few muscle car manufacturers have withstood the test of time. While a few entries took a break from production, they always came back strong. These entries were chosen based on their prominence, history, and popularity. Many early variations of the Corvette were mainly convertibles. The Corvette is a sports car known for its slick design and powerful engine. The 2016 model includes a 6.2liter V8 engine. The Chevy Corvette Z06 for 2016 has a sevenspeed manual gearbox option. One beloved feature of newer Mustang models are the rounded headlights. One notable difference is the 5.0liter engine, with most competitors a 6.0liter is common. The 2017 Ford Mustang GT features 435 horsepower.

Early generations saw this vehicle as a sleek and rounded sports car. This generation is when the longer front end design of the Camaro became the norm. Chevrolet decided a new generation would begin for this American sports car in 2010. The Camaro is now in its fifth generation of production. During its earlier generations, the Challenger would struggle to build a legacy against already established vehicles. In 2008, the modern Dodge Challenger would debut its 4th generation design. This newer Challenger is notable for its classic muscle car appeal. Click here to learn more about the history of American automobiles. It directly engages the clutch release bearing. If the slave cylinder fails, you won't be able to shift the truck. Remove the transmission unplug any wiring harness connectors and remove transmission lines. Unhook the linkage. Support the transmission on the floor jack and remove the bellhousing bolts. Pull the transmission back, away from the engine see Resources for more detailed instruction. Pull the slave cylinder off the input shaft. Take note of the bleed screw and coupling positions. Install and tighten the two bolts to 80 inchpounds of torque. Reinstall the transmission. Leave the vehicle on the jack stands. Fill the master cylinder with DOT 3 brake fluid. Open the bleeder screw on the slave cylinder. Close the bleeder screw.

Instruct the helper to release the clutch pedal. Repeat the process until you cannot hear air pushing through the system. Check the fluid level in the master cylinder every three to four pushes, and top off as necessary. If the clutch does not release properly, remove the cap from the master cylinder and pump the clutch pedal fast for 30 seconds. Stop and let the air escape. Top off the master cylinder as needed. Repeat the bleeding procedure. Top off the master cylinder as needed. You will need all the electronics that go with it.
