The manual No part of this publication may be reproduced in any form Refer all servicing to your retailer, the nearest Roland Service Center, or an authorized Roland distributor, as listed on the "Information" sheet. If using some other make of connection cable, please note the following precautions. Whether you are simply preparing a demo tape, or are getting ready to go to master with your first album, the simple operation of the BR864 allows you to create digital recordings the very day you take it out of the box. The BR864 uses 32 MB to 1 GB CompactFlash cards with a 3.3 V power supply. CompactFlash Type II cards are not compatible. CompactFlash cards are available at

your nearest computer or digital camera shop. This indicator lights at a level 6 dB lower than where sound distortion occurs. <http://eska-lift.ru/userfiles/cotton-production-manual.xml>

Adjust the input sensitivity with the SENS knob so that this indicator lights only occasionally, at those moments when you play your guitar or other instrument at its loudest. The button of the track selected will flash in red and then light in red when recording begins. When recording is finished, the button of the selected track will light alternately in orange and green. Listening to the demo songs 2. Lower the MASTER fader on the BR864. If this is the case, perform the procedure given below to adjust the contrast 1 to 32. Always make sure that the recorder is stopped before turning off the power to the BR864. If a memory card is inserted when the power is turned on, the data in the memory card may be destroyed, or the memory card may become unusable. This enables you to select the combination of audio quality and recording time that is most suitable for the material you are recording. When not using the internal microphone, be sure to turn it off see next section. What is an insert effect. An effect added directly to a specific signal with the BR864, this refers to the instrumental sounds from an INPUT jack is called an "insert effect." The effect pedals that a guitarist connects between his guitar and amp are a type of insert effect. When you record, it is convenient to use the builtin rhythm guide. The "rhythm guide" is a dedicated rhythm track that can not only play back rhythm sounds as a guide during recording, you can also use it to play internal rhythm patterns and original usercreated rhythm patterns and to play and record these patterns as your own rhythm part performances. Changing patterns 1. About the recording REC modes Recording on the BR864 is separated into three main modes. Use whichever mode is suitable in the course of bringing your song to completion. Adding width to the sound Loop Effect The BR864 features chorus, delay, and doubling any one of these three can be selected at any one time as loop effects, and includes reverb as well.

Effective use of these allows you to add greater breadth to the sound. If the button flashes in red, that track is ready for recording. Therefore, by making use of the many VTracks, you can use the BR864 just as if it were a 64track multitrack recorder. This allows a wide range of uses, such as recording one take of a guitar solo or vocal, and then recording another take without having to erase the first one. This may make it difficult for you to set the repeat portion exactly as you desire. If this is the case, you can use a separately sold footswitch BOSS FS5U, Roland DP2, etc. and use your feet to punch in and out. Recording automatically starts at the auto punchin location, so start playing what you want to record. These are grouped according to different input sources and each group is called a "bank.". If you wish to save the effect settings that you edited, save them as a user patch or song patch. If you exit the Edit Effect screen without saving the effect patch you changed, "TMP" appears next to the indication of the bank. Be aware that if you select a new effect patch while "TMP". However, sometimes you want to change the connection order. On the BR864, you can accommodate a wide variety of situations by changing the point to which the insert effects are connected. Follow the procedure below to change where insert effects are connected. This is called "bounce" also known as bounce recording or pingpong recording. Return to the Play screen. The REC TRACK button for the track selected as the recording destination flashes in red. If the selected recording destination track already has data recorded to it, the REC TRACK button for that selected recording destination track alternately lights up in orange and green. For a fuller description of Track EQ, refer to "Track EQ Parameter Functions" p. 133. Track EQ do not have "patches." Loop effect settings are saved along with the song data.

Blocks that are turned on are shown in uppercase letters, while blocks that are turned off are shown in lowercase letters. This function is quite useful during editing. Registering a locator point 1. When you use the Scrub Function during playback called "scrubbing", the portion from your before or after the. Example exchanging all the data on track 1 with all the data on track 2 fig.02352 Track 1 Track 2 Track 1. Recording to a digital recorder digital connection 1. Connect the BR864's DIGITAL

OUT connector to the digital recorders input connector. Measure This sets the number of measures in the pattern to be recorded. The BR864 is put into Rehearsal mode. fig.03409d. The recording standby screen appears in the display. There are three ways to load drum tones. The algorithms that can be selected will differ for each bank. To select the algorithm that you wish to use, first select the effect bank that includes that algorithm, and then refer to the "Effect Patch List". VOCAL MULTI This is a multieffect designed for vocals. Those companies are not affiliated with BOSS and have not licensed or authorized BOSS's BR864. Their marks are used solely to identify the equipment whose sound is simulated by BOSS's BR864. Increasing the value will increase the harmonic content and therefore will create a more unusual sound. Level Adjusts the volume of the defretter sound. Delay This creates a thicker sound by applying a delayed sound to the direct sound. HiM Q This parameter sets the range of change in gain for the frequency set by "HiM F." A larger value results in a narrower range of change. Hi Gain This parameter sets the gain amount of boost or cut for the treble equalizer. When it is on, the pitch change of the synthesizer sound is in semitone steps. This does not respond to pitch changes less than a semitone, such as what might be obtained with bending or vibrato. Select different types to get a variety of different filter effects. OFF The modify filter will not be used.

LPF The effect will function as a low pass filter. BPF The effect will function as a band pass filter. CLEAN The sound of a conventional builtin tube amp. Speaker Simulator This simulates the characteristics of various types of speakers. When the output of the BR864 is connected directly to a mixer, etc., this can be used to create the sound of your favorite speakers system. This adds two voice characters with differing formants to the direct sound. Formant1 Adjust the formant of the voice character 1. Input Gain Sets the overall volume before passing through the equalizer. Low Type Sets the equalizer type shelving, peaking for the lower range. Low Gain Sets the amount of boost or cut in the lower range. Lo Thres This sets the volume level at which the lowerrange expander goes into effect. Lo Ratio This sets the ratio of increase in output of the lower range when the input level falls below the Lo threshold level. Lo Level Sets the volume level of the lower range after the signal passes through the expander and compressor. Mid Level Sets the volume level of the midrange after the signal passes through the expander and compressor. FX Type This sets the type of the effect. CHORUS A sound with a subtly shifted pitch is added to the direct sound, making the final output sound thicker and broader. DELAY This creates a thicker sound by applying a delayed sound to the direct sound. The lower part will display a tuning guide to indicate the difference between the input sound and the displayed note. When the BR864 begins playing, the MIDI sequencer will also begin playing in sync with it. What are drop and nondrop formats. There are two types of format used by NTSC video cassette recorders, nondrop and drop. Your BR 864 supports the MMC protocol. By using MMC, your BR864 can send commands such as PLAY, STOP, and FF to connected MIDI devices to operate them. MASTER MMC information is sent.

Also, since you can output the signal from the MIDI device without having to first record it to a track on the BR864, you can use the BR864 tracks more effectively. fig.05501. Before you insert or remove a memory card, always turn off the BR864 first. If a memory card is inserted when the power. The offset is set as the difference between the "time to which to align the MTC timing" and the "time to which to align the song timing.". The USB function select screen appears. Conversion of the WAV or AIFF file begins. The USB function select screen appears. The USB function select screen appears. Drag the imported WAV or AIFF file to the "USB". The USB function select screen appears. The USB function select screen appears. The load is executed. You can use commercially available CompactFlash cards as memory cards for the BR864; The 3.3 V type with the capacities of 32 MB to 1 GB can be used. Are you attempting to play back a short phrase of less than 1.0 seconds Phrases of 1.0 seconds or less cannot. Synchronization problems Cannot synchronize When using MTC to synchronize the BR864 with a MIDI sequencer, the BR864 must be the master device. Is the MIDI cable connected correctly. Is the MIDI cable broken A newly created song provides approximately

1,000 events per song. Solution 2 Check the format of the WAV or AIFF file or SMF. The transmitted time counts are summed to "SMPTE MTC Offset Time" as the song top is "00000000". FEDERAL COMMUNICATIONS COMMISSION RADIO FREQUENCY INTERFERENCE STATEMENT This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.
